Education

Invertis University, Bareilly

2025 – Present

Bachelor of Computer Applications (BCA)

Specialization in Artificial Intelligence and Machine Learning

Technical Skills

Languages: Python, Java, SQL, HTML5, CSS3, JavaScript, TypeScript

Libraries & Frameworks: NumPy, Pandas, Scikit-learn, Streamlit, PyPDF

Developer Tools: Git, GitHub, VS Code, Power BI, REST APIs

Core Concepts: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), Machine Learning, Data Analysis, DBMS, Agile Methodology

Professional Experience

AI/ML Intern — InternCareerPath

May 2026 – Jun 2026

- Developed Python-based machine learning pipelines involving data preprocessing, model experimentation, and evaluation across 10,000+ records.
- Applied NumPy, Pandas, and Python to engineer features and clean messy datasets, reducing data preparation overhead by 25%.
- Collaborated on assigned ML deliverables adhering to Agile sprint cycles, PEP 8 code standards, and project deadlines.
- Evaluated supervised learning classification models to optimize baseline performance metrics such as accuracy and F1-score.

Software Developer Intern — Zetheta Algorithms Pvt. Ltd.

Jun 2026 – Jul 2026

- Contributed to core software development tasks and script refactoring using Python and Git-based collaborative workflows.
- Worked on feature implementation, code optimization, and bug fixing within an Agile development environment.
- Improved application reliability by diagnosing code anomalies and writing clean, modular, and maintainable software components.

Projects

Orbis | TypeScript, Web Architecture, State Management, UI/UX

GitHub

- Built a modern, scalable web platform using TypeScript, enforcing strict type-safety across 20+ modular, reusable UI components.
- Implemented client-side routing, modular state management, and optimized asset bundling, cutting initial load latency by 30%.
- Engineered clean component interfaces with structured error handling to prevent runtime exceptions and improve maintainability.

life.rgb | JavaScript, DOM Manipulation, Algorithmic Rendering, CSS3

GitHub

- Developed an interactive color-space exploration web application in JavaScript focusing on dynamic color algorithms and visual state logic.
- Implemented real-time algorithmic rendering and state listeners with zero external dependencies, maintaining a fluid 60 FPS performance.
- Designed an intuitive, accessible frontend layout featuring responsive controls and efficient event-driven updates.

College Club Platform | HTML5, CSS3, JavaScript, Responsive Web Design

GitHub

- Designed and launched a centralized campus club discovery portal connecting multiple university clubs and 200+ student inquiries.
- Created structured, accessible interfaces for club profiles, upcoming campus events, and membership registration forms.
- Conducted cross-browser and cross-device testing across 8+ viewport sizes to ensure 100% layout consistency and responsiveness.

Achievements & Honours

- Ranked among the Top 100 teams in the Smart India Hackathon (SIH) University Internal Hackathon.
- Cleared Round 1 of the IIT Bhubaneswar Hackathon competing against teams across multiple institutions.
- Solved 100+ Data Structures and Algorithms problems on LeetCode covering arrays, strings, recursion, and sorting.

Certifications

- Career Essentials in Generative AI by Microsoft and LinkedIn
- Google AI Essentials Professional Certificate – Google
- IBM SkillsBuild – Introduction to Generative AI
- IBM SkillsBuild – Artificial Intelligence Fundamentals
- IBM SkillsBuild – Responsible AI
- AI/ML Internship Certificate – InternCareerPath
- Software Developer Internship – Zetheta Algorithms Pvt. Ltd.
